GETTING STARTED

For the best cleaning & care results when maintaining your Morzze products, please follow all instructions carefully, and only use the suggested cleaning agents. Using other cleaning agents may cause damage or discoloration and may potentially affect the functionality of your product.

Always test all cleaning agents on an inconspicuous area of your Morzze product before applying to the entire surface.

Wipe all surfaces clean and rinse them completely with water immediately after applying the cleaner. Rinse and dry any excess cleaner that may land on adjacent surfaces. Do not allow cleaner to sit, as it may soak in and cause damage.

Use a soft, damp cloth or sponge. **DO NOT** use any abrasive material, such as a scouring pad, brush, or steel wool, to clean the surface of your Morzze product.

The effectiveness of all cleaners depends on factors like water hardness and temperature, consistency of cleaning formulas, and age/condition of the product being cleaned. Variations in these, and other, factors mean that Morzze cannot guarantee the effectiveness of any cleaner or procedure used. Please see the product warranty for further details on what is covered under normal conditions of use.

BATHROOM FAUCET

To keep your bathroom faucet functioning at its best, it is important to properly care for and clean it regularly. Here are some care and cleaning instructions for your faucet:

Regular Cleaning: Clean your bathroom faucet with a soft cloth or sponge and mild soap or dish detergent. Wipe the surface in the direction of the polish lines to avoid scratching the surface. Rinse with clean water and dry with a soft cloth.

Avoid Harsh Chemicals: Do not use harsh chemicals, bleach, ammonia, chlorine, acid, toilet cleaner, abrasive cleaners, or scouring pads on your bathroom faucet. These can damage the surface of the faucet and cause scratches or discoloration.

White Vinegar Solution: For tougher stains or hard water deposits, mix equal parts of white vinegar and water in a spray bottle. Spray the solution onto the faucet and let it sit for a few minutes before wiping it off with a soft cloth. Rinse with clean water and dry with a soft cloth.

Baking Soda Paste: To remove stubborn stains or grease buildup, make a paste using baking soda and water. Apply the paste onto the affected area and let it sit for a few minutes. Gently scrub with a soft cloth or sponge and rinse with clean water. Dry with a soft cloth.

Avoid Scratching: Avoid using steel wool, wire brush or other abrasive scrubbers on your bathroom faucet as these can cause scratches. Also, be careful with sharp utensils or objects near the faucet to prevent accidental scratches.

Polish Periodically: To maintain the shine and luster of your bathroom faucet, polish it periodically with a brass/steel cleaner or polish.

Dry After Use: After using your faucet, be sure to dry it with a soft cloth to prevent water spots and mineral deposits from forming.

Avoid Hard Water Buildup: If you have hard water, consider installing a water softener to prevent mineral buildup on your faucet and other fixtures in your home.

When purchasing a cleaner for your bathroom faucet, look for a brand that explicitly states its products are "suitable for brass/stainless steel".

We recommend using your choice of cleaner from the Products to Consider section below.

Following these care and cleaning instructions will help keep your kitchen faucet looking shiny and new for years to come.

Products to Consider for Cleaning:

- Metloshine®
- CIF® Cream
- Bar Keepers Friend®
- Soft cloth
- Sponge

THANK YOU
For Choosing

MORZZE
Beyond Excellence...
